

Universal Automation Systems

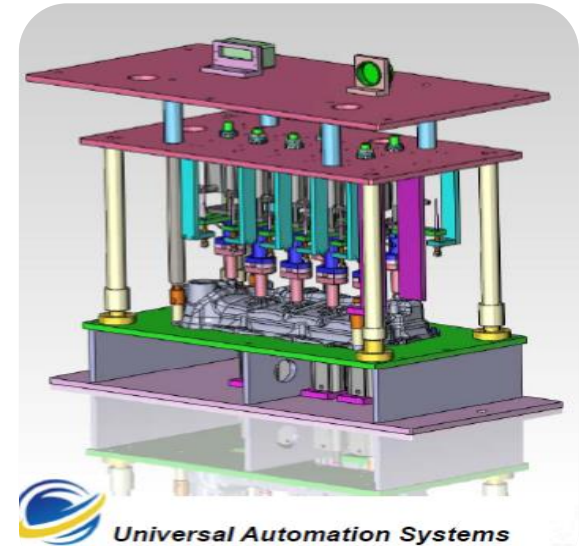

Company : Universal Automation Systems is an organization with a solid vision of providing competitive and customized automation solution, quality products through innovative system integration capabilities with a strong commitment to build customer confidence.

Challenge :

- Prototyping machines cannot process 2D CAD data
- Identification of collisions almost impractical
- Poor Visualisation of design by customer
- Time to market high
- Design change process longer & prone to mistakes

Key Benefits :

- More effective communication with suppliers/customers
 - Visualize more 'what-if' scenarios during the design process
 - Easy & faster interference analysis of assemblies
 - Reduce the need and cost of physical prototypes
- Development and prototyping costs has reduced by 50%

Universal Automation Systems

Universal Automation Systems

“3D CAD models can save time & money in the long run”

Mr. Ravikumar, Chief Executive
